# What Can PDF Search Engine Do For You

Search Engines are prejudiced to crawl up the specific words that you are looking for with the robots or spiders to crawl from the web and you can place the words in the search page. PDF, means portable document format, is a particular format to repossess data from the search engines. This is a constructive application.

All the PDF search engines are same, as they vary with advancement and by the level of their peculiarities. Some of the PDF search engines are for searching computer and IT related e-books, where as some are meant for public documents, on some you can switch to your own language and add it to your browser's search engine list, and some help in the provision of a tool with which you can convert your PDF files to text files for instance, conversation, etc.

We all want to live in a crystal clear world where we can have no vagueness at all. Here are a few tips on how to retrieve data better on PDF search engines:

The Nineteenth century mathematics algebra, pioneered by George Boole, Boolean searching which gives productive results and exclude the documents that are irrelevant with the symbolic logic. The Boolean AND, connects keywords, retrieving data containing all the key words, the Boolean OR, instructs the Search engine to retrieve data containing any and all the key words, the Boolean AND NOT, tells the Search engine to retrieve data containing one keyword but not the other. All the implied Boolean + is equivalent to AND, while the implied Boolean – is equivalent to AND NOT.

Search effectively in PDF searching by using double quotes, which instructs the Search engine to retrieve only data in which those words appear side by side and phrase searching. Like for instance, if you put "Red hats" will retrieve web pages in which the words RED and HATS appear next to each other.

In fact it is true that few PDF search engines support features that allow variations in spelling or word forms. The sign asterisk (\*) tells the Search engine to produce results with alternate spellings for example, Local\* returns results with Locally, Localize, Locality, etc.

Moreover, good knowledge of domains enhances searches as well. If you want to find out about the current US domain like .edu- for educational institutions, .com- for commercial businesses, .gov- for governmental institutions, .org- for non-profit organizations, .mil- for military sites, .net- for network sites.

It is true that the above stated tips will help you with a enhanced searches on PDF search engines, one of the best way to get the optimization done in the PDF search engines is to get the text base PDF search engines.
