What is Domain Name Registration

Domain name registration is one of the fundamental yet crucial steps in establishing a website. The domain name for your website should be registered to the web Corporation for Assigned Titles and Numbers (ICANN). ICANN, a non-profit organization, has a list of all registered domain name as well as manages them according to set of standards and policies with regard to proper usage and towards internet crimes.

In [registering your domain name](#), you can choose whether to have your domain name public or private. Domain names registered as public means the domain name, the personal information, information and other data and information provided during the registration process is visible publicly by anyone. What this means is the name of the owner, the email tackle, phone number and physical address is visible if a person inquires through WHOIS. In the event that private, the information regarding the who owns the domain name is protected. Access of the information is restricted and may only be availed with the permission of the owner of the domain name. If asked through WHOIS, the information of the registrar, instead of the owner, appears. The dog owner remains to have control as well as access of the domain as well as domain name even when registered under an alternate.

Most companies into marketing as well as advertisement would prefer to have their domain name authorized publicly. This way, the customers as well as clients will see that the website is credible, respectable and serious in the efforts to provide service. Nevertheless, providing information for open public eye means you are prone to spam. Your information is also available for anyone to use for what ever purpose. If your website is for personal use and marketing, and you do not mind any of the susceptibilities to your information, then you can also opt to register your domain name because public.

Your domain name may be authorized as private and your info will be protected. But whether or not the public does not have access to your personal information and contact details, email messages will still reach you via the [domain registrars](#). You can opt upon where the emails would go or you can refuse to obtain messages. Registering your domain name as private would require additional fees. Even with the steeper fees, it is improves still to have your data personal to avoid any potential compromise. Click <http://registering-a-domain-name.org/> for more important details.
